

## EXECUTIVE SUMMARY (ONE-PAGER)

Project: GETH — Global Energy Trade Hub

Stage: Idea Stage / Pre-seed (no product, no licences, no revenue yet)

Team: Pavel Bogomolov-Cheliuskin (Founder) + Vadim Ustinov (Technical Co-Founder)

Jurisdiction: UAE (DMCC + VARA pathway — to be obtained)

Website: <https://gethfounder.github.io/geth-website/>

Ask: \$600k – \$1.2M pre-seed

### Problem

- \$4.6T OTC commodity market → 63% manual processes (Excel, email, fax)
- Fake certificates cost buyers >\$50B/year
- Disputes over cargo quality take 18+ months in courts
- SMEs have no access to trade finance or verified counterparties
- Existing platforms (Vakt, Komgo) failed — closed consortiums limited to top-20 banks, real cost 1.5-3.0%

### Vision — Digital Platform for OTC Commodity Trade

GETH aims to become a next-generation automated digital ecosystem combining three layers:

#### 1. AI Smart Layer

- Counterparty risk scoring (financials, legal records, reputation → trust index)
- Commodity matching (finds best offers matching buyer specs)
- Deal stitching (automatically pairs buy/sell orders into ready-to-trade proposals)
- Automated KYB/KYC via API (Sumsb, ComplyAdvantage) — <10 min verification

#### 2. Trust & Tracking Layer

- IoT-based cargo monitoring (temperature, GPS, tamper-proof)

- NFT certificates linked to SGS/Bureau Veritas
- Smart contract escrow via regulated bank (RAKBANK or equivalent)
- Automated arbitration based on DIFC-LCIA rules → 14-day target

### 3. Two-Token Economy

- \$GETH (exchange token, 100M max supply) — buyback & burn from platform fees, staking rewards, CEX/DEX listing
- \$vGETH (utility/governance token) — burned for certificates, API access, priority matching, DAO voting

Pricing — 1.10% All-Inclusive (60-70% cheaper than traditional brokers)

| Tier                            | Platform | Escrow | Total        | For \$19M deal |
|---------------------------------|----------|--------|--------------|----------------|
| <b>Intro (first 10 clients)</b> | 0.25%    | 0.45%  | <b>0.70%</b> | \$133,000      |
| <b>Regular</b>                  | 0.50%    | 0.60%  | <b>1.10%</b> | \$209,000      |
| <b>Early Adopter Lifetime</b>   | 0.35%    | 0.55%  | <b>0.90%</b> | \$171,000      |

*Minimum fee: \$5,000 per deal. Maximum fee: \$750,000 per deal.*

Concrete Use Case: 50,000 MT Fuel Oil (UAE → India)

- Seller uploads lot + SGS certificate → AI scores counterparty risk in <10 min
- Buyer books via regulated escrow → \$19M locked, 1.10% all-in fee
- Intermediary auto-matched → transparent commission, real-time logistics tracking

- Settlement triggered by IoT + quality verification → funds released in <2 hours, not 18 months
- **Target GETH revenue per deal: \$209,000 (1.10%)**
- Seller receives: \$18,791,000 | Intermediary receives: \$38,000 (separate)

### Why UAE (with contingency)

- VARA — first framework for commodity-backed digital assets in MENA
- DMCC — 50,000+ commodity firms as natural clients
- **0% corporate tax until 2031**
- ADGM/DIFC — English common law, globally recognised
- Plan B: If VARA reclassifies \$GETH as a security → pivot to ADGM (FSRA) framework

### Team

- Pavel Bogomolov-Cheliuskin — Founder (Fuel & Gas Trading)
- 8+ years executing fuel and gas trades across UAE, Finland, Mozambique, Zimbabwe, and other markets at Harka, Pentium AG, G-Gas, and Grandcliff Petroleum. Deep understanding of industry pain points.
- Vadim Ustinov — Technical Co-Founder (Software Engineer)
- Classically trained engineer with decades of experience building complex systems. Combines rigorous engineering foundations with practical business acumen — understands not just code, but the commercial logic behind every product. Committed to quality, reliability, and scalable architecture.

Use of \$800k Pre-Seed (Legal First Approach)

| Category                        | %   | Rationale                                                                                        |
|---------------------------------|-----|--------------------------------------------------------------------------------------------------|
| Legal Framework (UAE Licensing) | 40% | Priority #1: DMCC license + VARA conditional approval + token structuring before any development |
| Team (Founders + Engineers)     | 30% | Lean team preparation for post-licensing development                                             |
| MVP Development (Software + AI) | 20% | Begins only after legal foundation is secured                                                    |
| Partnerships + Test Deals       | 5%  | Pilot deal preparation with trusted network                                                      |
| IoT / Hardware Integration      | 5%  | Partner research (no in-house manufacturing)                                                     |

Financial Forecast (Illustrative — Pre-Revenue)

| Year               | Deals    | Volume  | Revenue | EBITDA  |
|--------------------|----------|---------|---------|---------|
| 1 (post-MVP, 6 mo) | 4 intro  | \$48M   | \$336k  | -\$464k |
| 2                  | 21 mixed | \$315M  | \$3.1M  | +\$1.6M |
| 3                  | 70 mixed | \$1.26B | \$13.5M | +\$9.5M |

## Why Invest at Idea Stage?

- Massive TAM with clear pain and no dominant player
- Previous attempts (Vakt, Komgo) failed — market is ready for an open platform
- Founders have direct industry access + engineering depth
- UAE regulatory window open now — timing advantage
- "Legal first" approach reduces regulatory risk vs. competitors who build first
- 1.10% all-inclusive pricing — 60-70% cheaper than traditional brokers
- Honest about stage: no fake traction, no vapourware

Disclaimer: GETH (Global Energy Trade Hub) is not affiliated with Go-Ethereum (Geth) or any cryptocurrency protocol.
