

Project: GETH — Global Energy Trade Hub

Stage: Idea Stage / Pre-seed (no product, no licenses, no revenue yet)

Team: Pavel Bogomolov-Cheliuskin (Founder) + Vadim Ustinov (Technical Co-Founder)

Jurisdiction: UAE (DMCC + VARA pathway — to be obtained)

Website: <https://gethfounder.github.io/geth-website/>

Ask: \$600k – \$1.2M pre-seed

Problem

- **\$4.6T OTC commodity market** → 63% manual processes (Excel, email, fax)
- **Fake certificates** cost buyers >\$50B/year
- **Disputes** over cargo quality take 18+ months in courts
- **SMEs** have no access to trade finance or verified counterparties
- **Existing platforms** (Vakt, Komgo) failed to scale beyond bank consortia

Vision — Automated Digital Ecosystem

GETH aims to become a next-generation automated platform combining three layers:

1. AI Smart Layer

- Counterparty risk scoring (financials, legal records, reputation → trust index)
- Commodity matching (finds best offers matching buyer specs)
- Deal stitching (automatically pairs buy/sell orders into ready-to-trade proposals)
- Automated KYB/KYC via API (Sumsb, ComplyAdvantage) — <10 min verification

2. Trust & Tracking Layer

- IoT-based cargo monitoring (temperature, GPS, tamper-proof)
- NFT certificates linked to SGS/Bureau Veritas
- Smart contract escrow via regulated bank (RAKBANK or equivalent)
- Automated arbitration based on DIFC-LCIA rules → 14-day target

3. Two-Token Economy

- **\$GETH** (exchange token, 100M max supply) — buyback & burn from platform fees, staking rewards, CEX/DEX listing
- **\$vGETH** (utility/governance token) — burned for certificates, API access, priority matching, DAO voting

Concrete Use Case: 50,000 MT Fuel Oil (UAE → India)

- Seller uploads lot + SGS certificate → AI scores counterparty risk in <10 min
- Buyer books via regulated escrow → \$19M locked, 0.5% platform fee + 0.1% escrow fee

- Intermediary auto-matched → transparent \$38k commission split, real-time logistics tracking
- Settlement triggered by IoT + quality verification → funds released in <2 hours, not 18 months
- **Target GETH revenue per deal: \$28,500 (0.15%)**

Why UAE (with contingency)

- **VARA** — first framework for commodity-backed digital assets in MENA
- **DMCC** — 50,000+ commodity firms as natural clients
- **0% corporate tax** until 2031
- **ADGM/DIFC** — English common law, globally recognised
- **Plan B:** If VARA reclassifies \$GETH as security → pivot to ADGM (FSRA) framework

Team

- **Pavel Bogomolov-Cheliuskin** — Founder (Commodity Trading + FinTech) 12+ years physical oil trading at Vitol/Glencore/Mercuria. Executed \$2B+ OTC deals. Direct network of pilot customers across UAE, India, Singapore.
- **Vadim Ustinov** — Technical Co-Founder (Software Engineer) Classically trained engineer with decades of experience building complex systems. Combines rigorous engineering foundations with practical business acumen — understands not just code, but commercial logic behind every product. Committed to quality, reliability, and scalable architecture.

Use of \$800k Pre-Seed (Legal First Approach)

Category	%	Rationale
Legal Framework (UAE Licensing)	40%	Priority #1: DMCC license + VARA conditional approval + token structuring before any development
Team (Founders + Engineers)	30%	Lean team preparation for post-licensing development
MVP Development (Software + AI)	20%	Begins only after legal foundation is secured
Partnerships + Test Deals	5%	Pilot deal preparation with trusted network
IoT / Hardware Integration	5%	Partner research (no in-house manufacturing)

Financial Forecast (Illustrative — Pre-Revenue)

Year	Volume	Revenue	EBITDA	Key Milestone
1 (post-MVP, 6 mo)	\$2M–\$5M	\$40k–\$100k	-\$600k	5–10 test deals, VARA approval
2	\$20M–\$40M	\$400k–\$800k	-\$200k	\$GETH launch, 50+ active traders

3	\$100M– \$200M	\$2M–\$4M	breakeven	\$vGETH introduction, DAO pilot
---	-------------------	-----------	-----------	---------------------------------

Why Invest at Idea Stage?

- Massive TAM with clear pain and no dominant player
- Founders have direct industry access + engineering depth
- UAE regulatory window open now — timing advantage
- "Legal first" approach reduces regulatory risk vs. competitors who build first
- Two-token model creates aligned incentives and deflationary mechanics
- Honest about stage: no fake traction, no vaporware

Disclaimer: GETH (Global Energy Trade Hub) is not affiliated with Go-Ethereum (Geth) or any cryptocurrency protocol.
