Building Digital Infrastructure for Commodity Trade

GETH is an idea-stage project building digital infrastructure for the \$4.6 trillion OTC commodity market — starting with a legal foundation, then an automated platform to reduce settlement times from months to hours.

What Is GETH?

GETH (Global Energy Trade Hub) is an idea-stage project designed to become a digital ecosystem for over-the-counter (OTC) commodity trading. It targets three chronic pain points of the \$4.6 trillion market: manual, paper-based processes; certificate fraud; and slow dispute resolution.

The approach is **legal-first**: secure the regulatory foundation (UAE VARA + DMCC licensing), then build an automated platform with AI-driven counterparty scoring, smart-contract escrow and real-time cargo tracking, and finally validate it with test deals sourced from the founder's own trading network.

The Problem

1 63% Manual Processes

Excel spreadsheets, email chains and fax machines still dominate commodity trading workflows.

2 Fake Certificates

Fraudulent quality certificates cost buyers over \$50 billion annually.

Source: International Maritime Bureau

3 18+ Month Disputes

Court delays and arbitration bottlenecks kill deals and tie up capital.

Source: ICC Dispute Resolution Statistics

4 SMEs Locked Out

Small and medium enterprises have little access to trade finance or verified counterparty networks.

Our Vision — Legal First → Platform → Test Deals

Priority #1 — Legal

Secure the regulatory foundation before any development: DMCC trade license, VARA conditional approval, token legal structuring, escrow partnership with a regulated bank, corporate governance, and an ADGM regulatory contingency plan.

Priority #2 — Platform

Once the legal foundation is secured, build the production platform: AI counterparty risk scoring, smart-contract escrow, IoT cargo tracking, NFT-based quality certificates, and automated KYB/KYC verification.

Priority #3 — Validation

Validate with 5–10 pilot transactions sourced from the founder's network, iterate on real feedback, confirm unit economics, and prepare for a seed round.

Target Pricing

1.10% all-inclusive standard fee — significantly lower than traditional brokers (1.5%–3.5%). Minimum fee \$5,000 per deal; maximum fee \$750,000 per deal. Final pricing subject to regulatory approval and market conditions.

	Early Adopter (First 10 Clients)	Standard (All-Inclusive)	After Intro Period (Early Adopter Lifetime)
Platform fee	0.25%	0.50%	0.35%
Escrow fee	0.45%	0.60%	0.55%
Total	0.70%	1.10%	0.90%

Roadmap

Q1	DMCC trade license application · VARA conditional approval · token legal structuring · corporate governance setup
Q2	Legal framework completion · core team assembly · architecture design · bank partnership negotiations
Q3	MVP development begins · AI scoring engine prototype · escrow integration · IoT partner integration
Q4	Beta platform launch · first 5–10 test deals · seed round preparation · tokenomics design (if applicable)

Use of \$800K Pre-Seed Round

Legal framework (UAE licensing + token structuring)	40%
Team (founders + engineers)	30%
MVP development (post-licensing)	20%
Partnerships + test deals	5%
IoT integration research	5%

Team

Pavel Bogomolov-Cheliuskin — Founder & CEO

8+ years executing fuel and gas trades across UAE, Finland, Mozambique and Zimbabwe at Harka, Pentium AG, G-Gas and Grandcliff Petroleum. Direct network of traders, refineries and logistics providers across MENA, Europe and Africa.

Vadim Ustinov — Technical Co-Founder & CTO

Classically trained software engineer with decades of experience building complex systems. Combines rigorous engineering foundations with practical business acumen.

Investment Opportunity: \$600K – \$1.2M Pre-Seed. At idea stage — first priority is the UAE legal framework, then platform development, then test deals with the founder's network. Investors receive an equity stake via SAFE or convertible note, early access to token allocation (if applicable), a direct advisory role, quarterly progress updates, and pro-rata rights in the seed round.
